The image shows a Visual Studio Code editor window with a Python file named `project.py`. The code defines three functions: `add_student()`, `view_students()`, and `search_student()`. The `search_student()` function is currently active, showing a search for roll number 70. The output of the search is displayed in the console.

```
21 def add_student():
37     student = {
38         "roll": roll,
39         "name": name,
40         "branch": branch,
41         "marks": marks,
42         "grade": get_grade(marks)
43     }
44
45     students.append(student)
46     print("Student added successfully!")
47
48
49 def view_students():
50     if len(students) == 0:
51         print("No student records available.")
52         return
53
54     print("\n--- STUDENT RECORDS ---")
55
56     for s in students:
57         print("Roll No :", s["roll"])
58         print("Name   :", s["name"])
59         print("Branch  :", s["branch"])
60         print("Marks   :", s["marks"])
61         print("Grade   :", s["grade"])
62         print("." * 30)
63
64
65 def search_student():
66     roll = input("Enter Roll No to search: ")
67
